

NEW!

The new tray transport trolleys from BLANCO. Strong support for your team.

The new tray transport trolleys (TTW) from BLANCO lend a supportive hand. The seamlessly deep-drawn support ledges help you load and unload trays swiftly. The four extra-long push handles offer an ergonomic handle

height for everyone in the team – for easier pushing, pulling, manoeuvring for persons of all sizes, even when the doors are open. The high-quality design ensures ideal hygiene with effortless cleaning, which saves valuable time.

**Quality that draws attention:
BLANCO tray transport trolleys –
for safe and hygienic food
distribution in the tray system.**

◀◀ **NEW:** Superior appearance in an award-winning design: durable and high-quality with a perfect form.

◀◀ **NEW:** Four ergonomic push handles with their large handle diameter make transport easier – regardless of which direction they're headed.

◀◀ **NEW:** The extra-wide all-round bumper rail protects the trolley and furniture, as well as hands when pushing the unit through narrow corridors and doors.

Convincing from the outside and the inside: Quality from the BLANCO brand.

High-quality materials

BLANCO tray transport trolleys are made of high-quality stainless steel (material 1.403). The micro polished surface is extremely resistant to soiling and germs.

Separate compartments

All doors can be opened independently of one another, even in the 3-door models. This facilitates removing the trays and helps to maintain constant temperatures in the interior for as long as possible.

Deep-drawn support ledges

Our deep-drawn ledge walls with integrated tip safety consist of a single piece – without dirty joints, sharp corners or edges. This makes cleaning easier, minimises the risk of injury and protects the trays.

NEW!

BLANCO tray transport trolley with passive cooling

In contrast to other units, at BLANCO the cooling elements are placed directly in the doors – simply insert the cooling elements (eutectic plates) in the holders on the inside of the doors, and you're done!

Because of this design principle, the interior can be equipped entirely with closed ledge walls. Each compartment can be opened individually when loading and removing the trays.

What this means for customers:

No undesired air exchange between the compartments, better temperature maintenance, fast access to the cooling elements, easier cleaning and better hygiene – because BLANCO just thinks ahead.
